PLACID Windscreen

Specially designed foam windshield to be used with 1/2" microphones for sound level meters in free field conditions.

In situations where the wind can come from multiple, unpredictable directions. The windscreens are only intended to filter out any wind noise influence on the microphone, the windscreens are not designed as rain protection as the frequency dependent attenuation will change when a windscreen is wet.

For conditions in high wind environments such as a wind tunnel, we would suggest PLACID Nose Cone PL/NC/002
